

MYEXPERIENCE

HOW TO & TIPS

WHAT IS MYEXPERIENCE?

MyExperience is a two-way platform that connects uLethbridge students and alumni with valuable personal and professional experience, and allows employers and staff to share their positions and opportunities to these groups.

WHAT CAN I DO WITH MYEXPERIENCE?

The MyExperience platform is designed and curated to help students and alumni find, manage, and share their uLethbridge experiences.

FIND

Students can explore a wide-range of experiences and opportunities through the Experience Catalogue

MANAGE

Students can find support along their career journey by booking appointments for Careers, Co-op, Applied Studies, and Study Skills. on the platform.

SHARE

Students and alumni can share a validated copy of their uLethbridge experiences, referred to as the MyExperience Transcript, with employers, graduate studies decision-makers, etc

THE EXPERIENCE CATALOGUE

Experiences included in the Catalogue include, but are not limited to, Co-operative Education and Applied Studies opportunities, chances for Community Service-Learning, Professional Development events, and much more!

WHAT CAN I FIND IN THE EXPERIENCE CATALOGUE?

- Experiences in every discipline
- Over 400 experiences to explore, both on and off campus
- Experiences completed on the platform will be recorded and shareable via your MyExperience Transcript
- All students have an account: just log in using your University single-sign on

Soil Science and Environmental Chemistry

Agriculture & Agri-Food Canada

Description

Co-op work term placements must accommodate all public health measures that are in place for the region where the work term will take place and for the proposed duration. Due to the COVID-19 pandemic, a high level of uncertainty about job prospects is to be anticipated, and working from home may be required. Local health guidelines and guidance will dictate the nature of the work. Students are expected to adhere to all COVID-19 rules and recommendations put in place by Alberta Health and the workplace. Full Covid-19 vaccination is a condition of employment with the Government of Canada.

We are seeking one (or two) co-op student(s) to participate in our research projects. One current project examines the effect of different nitrogen amendment technologies on GHG emissions from Spring Wheat cropping under dryland (rain fed) and irrigated conditions. Another project will focus on nutrient management practices and how they can contribute to the development of metrics and indicators for on-farm accumulation of carbon and reduction in GHG emissions.

The student(s) in this position will learn about general agriculture and soil science while assisting with projects involving soil, crop, and greenhouse gas sampling, sample processing, and sample analysis. The ideal candidate(s) will have an interest in both field and laboratory work. Winter season work will be underway which includes preparing gas sampling vials, preparing soil and crop samples, analyzing samples for various physical or chemical properties, and preparing equipment for the upcoming field season. Duties will shift more from inside work to field and sampling work as the growing season approaches. Tasks for all projects also include entering data and performing simple calculations and other duties as needed.
